Ceramic toner		MYKY (White,Black,Yellow ,Blue) 50g/ box 4 boxes one time
---------------	---	--

II.Printing photos:

III. Printing process:

IV. Instructions and advantages

The color production of high-temperature porcelain images is complicated, the equipment investment is slightly larger, and the equipment use environment requirements are high. Our high-temperature porcelain image production equipment does not distinguish between black and white and color. 30-60 minutes for all processes to complete imaging at one time, 870 degree high temperature oven, high temperature porcelain image production equipment has moderate temperature requirements for the placement and use of high temperature porcelain image printers, so a special incubator is required, and the imaging effect of high temperature porcelain images is not as good as thermal printing. , But the outdoor storage time is long and will never fade. The outdoor porcelain statues are generally high-temperature porcelain statues.
